*In the matter of: LightSquared Subsidiary LLC Request for Modification of Its Authority for an
Ancillary Terrestrial Component*

To: The Federal Communications Commission
Re: FCC File Number: SAT-MOD-20101118-00239

LightSquared's request for a modification of its Ancillary Terrestrial Component needs to be approved to make more spectrum space available and create more competition in a stagnant wireless broadband market.

As those who rely on mobile broadband devices can attest, the networks currently available to consumers are failing to keep up with the high demand. The explosion of both smartphone sales and streaming video opened the floodgates, but our infrastructure lags behind and remains unprepared. America needs not only more broadband capacity, but also more affordable service.

LightSquared offers the perfect solution. Their business model is a cutting-edge 4G-LTE speed network leased to a variety of businesses, allowing an entirely new group of companies to enter a wireless broadband market that has been dominated by a few large players. These new entrants increase competition and thereby foster innovation and lower prices.

Increased broadband capacity isn't just an issue of convenience; it's essential to continued economic growth, new jobs, and reducing the inequality between those currently connected and those who have been left behind. For these reasons, I sincerely hope you will not only consider but also approve LightSquared's request.

Respectfully submitted,
